

The Move to the Market?: Trade and Industry Policy Reform in Transitional Economies (International Political Economy Series)

The Move to the Market? brings together recent contributions that critically review and examine the role that trade and industry policy reforms have played in the transitional economies. It relates trade and industry policy to the wider set of reforms being implemented as part of the process of moving from a predominantly centrally planned to a more market-oriented economy. The book highlights the different and complex patterns of development that are emerging between the transitional economies of Europe, Africa and Asia.
